---

**Main Oven**

---

**Convection:**

This combination completes cooking more quickly of foods that are ready on the surface, but require more cooking inside, without further browning. For Gas Oven: Convection with lower elements: The fan is added to the gas burner to distribute the heat quickly and evenly throughout the oven cavity, avoiding flavour transfer when cooking a number of different dishes at the same time.

---

**Broiler:**

For rapid cooking and browning of foods. Best results can be obtained by using the top shelf for small items, the lower shelves for larger ones, such as chops or sausages. For half grill heat is generated only at the centre of the element, so is ideal for smaller quantities.

---

**Lower heating element only:**

Ideal for foods that require extra base temperature without browning, e.g. pastry dishes, pizza. Also suitable for slow cooking of stews and casseroles. For Gas oven: Bake: traditional convection cooking.

---

**Defrost at time:**

Defrost at time
